

IN THE SPECIFICATION

Please revise the paragraph starting at page 5, line 23, to read as follows.

*C1* The index n has the value such that the zwitterionic polymers of the present invention have an a weight average molecular weight of from about 1,000 to about 2,000,000 preferably from about 5,000 to about 1,000,000, more preferably from about 10,000 to about 750,000, more preferably from about 20,000 to about 500,000, even more preferably from about 35,000 to about 300,000 daltons. The molecular weight of the polymeric suds boosters, can be determined via conventional gel permeation chromatography.
